LEADERS

SEWING MACHINE

TO REMOVE THE BOBBIN

Our mechine w BICESEM THE TEST OF COME THE LINE OF COME OF THE COM

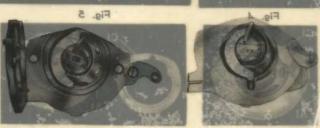

Turn the balance wheel over towards you until the thread take-up lever is raised to its highest position, draw to the left the slide in the bad of the machine.

Reach down with the thumb and forefinger of the left hand open the bobbin case latch (A) and lift out the bobbin case. While the latch remains open, the bobbin is retained in Shapi Bobin case.

Move the latches down (A. B.) and take out the ring (C) and bobbin will drop out.

Turn the balance wheel over toward you until the needle bar is at its highest position, and loosen the thumb screw (A Fig. 2) in the needle clamp.

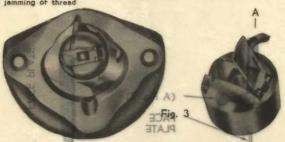

Have the flat side of the shank of the needle (B Fig. 2) toward the right as shown above and put the needle up into the clamp as far as it will go. Then tighten the thumb screw.

Pull and move the latches down (AL. St.) and take out the ring (CI) and cobbin will drop out.

TO REMOVE THE BOBBIN

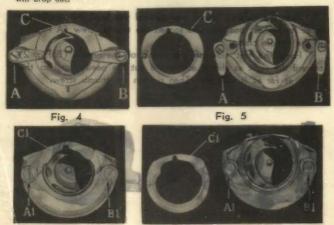

Our machine with swing door, you will find it quite easy to remove the shuttle hook so that you may clean the dust in shuttle hook and may fix up the jamming of thread

Turn the balance wheel over towards you until the thread take-up lever is raised to its highest position, draw to the left the slide in the bed of the machine.

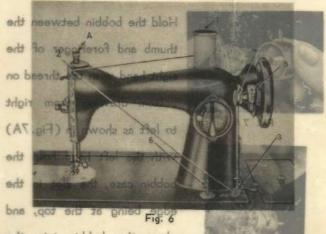

Reach down with the thumb and forefinger of the left hand, open the bobbin case latch (A) and lift out the bobbin case. While the latch remains open, the bobbin is retained in the bobbin case.

Move the latches down (A. B.) and take out the ring (C) and bobbin will drop out.

Pull and move the latches down (Al. Bl.) and take out the ring (C1) and bobbin will drop out.

TO MISSOS SHE GOISSIOTASE

Case (1); Coose the stop motion screw by way of holding the

Place the bobbin on the bobbin winder spindle and fix it up, having the bobbin press which prevents the bobbin from sliding down. Put the spool of thread on the spool pin (4). Pass the thread into the thread guide at the top of the face plate.

Then from right to left under and between tension discs (3) on the bed of the machine, then pass the thread up and fix it to the bobbin.

Then operate the machine in the same way as you do in sewing. When sufficient thread has been wound up on the bobbin, winder automatically stops.

To charge the quantity wound as you with, attached there is bobbin presser adjusting spool, which if you turn to the right it will increase, turn to the left, it will decrease.

Case (2); Place the bobbin on the bobbin winder spindle and fix it up. Put the spool of thread on the spool pin (6) and pass the thread into the thread guide (3) and fix it to the tension discs. From this process, it is the same way to wind as described above.

TO THREAD THE BOBBIND CASE

Fig. 7A

edt

Hold the bobbin between the thumb and forefinger of the right hand with the thread on bottom drawing from right to left as shown in (Fig. 7A) with the left hand hold the bobbin case, the slot in the edge being at the top, and

belonce wheel.

Place the bobbieses inidded winder

Place the bobbin press which prevents the bobbin trom shall be been and the bobbin press which prevents the bobbin trom shall be been been the bobbin the been the thread guide at the top of the face plate.

TO PREPARE FOR SEWING

With the left hand hold the end of the needle thread,

leaving it quite slack is raised to its highest from the hand to the needle, turn the pulley toward you until the up to its highest posie the tension thread quide (3) down into the loop Thus catching the under thread then pull the end of the needle thread lever (spriblod are nove And othe nunder) thread ed liw niddod and mort brought up with it thrdough the hole in the throat plate. (Fig. 10) Lay both ends of thread plack under the presser tensions (Pig. 17) snoisnest

TO COMMENCE SEWING

TO REGULATE THE PRESSURE ON THE MATERIAL

Have the needle at its highest point: lay the both ends of the needle threads and the under thread under the presser footinger ent no resser and agreement of the presser footinger ent no resser and the presser are the presser footinger ent no reserve and the presser are the presser are the presser are the presser and the presser are the presser are the presser and the presser are the presser are

Place edge of material under the presser foot above the needle hole: lower the foot upon it and begin to sew by turning the pulley toward you.

movements of the needle with the action of the machine, the result will be need work result and are

TO KEMOVE THE WORK

Stop the machine with the thread up-lever at its highest position, raise the presser foot and draw the material back, pass the thread over the thread cutter and pull down lightly to sever them. Leave the end of the thread under the presser foot.

TO TURN A CORNER

Stop the machine when the needle is commencing its upward stroke. Raise the presser foot and turn the work as desired, using the needle as a pivot, lower the presser foot.

NO STATE ON THE PRESSURE ON THE MATERIAL

to change the presser on the material, lighten the pressure by turning the thumb screw (Fig. 6A) to the lighter the material, the heavier pressure or the material of the pressure that material is the heavier pressure.

TO REGULATE PHENETH OF STITCH

shearth nidded be about and pointaits visuitor to a make from 5 to 80 stitch to a inch as indicated by the numerals on the stitch indication plate. To change length of stitch places the thumb strew and lever adoption of the lever is in line with the number of the desired length of stitch.

Then tighten the thumb received the screw and the screw an

The way by which the stitch is indicated below the line is the stine as the stitch above the line. bestuger ad bluods bast no en and no noisest adT

TO REGULATE PAOISNATH OF STITCH

For ordinary stiching, the needle and bobbin threads should be locked in the center of the thickness of the material like this:

numera indicated by the tion place.

If the tension on the needle thread is too tight, or if that on the bobbin is too loose, the needle thread will lie straight along the upper surface of the material like this:

only is a seven at a population of the part of the material like this:

with the length selection of t

If the tension on the bobbin thread is too tight, or if that on the needle is too loose, the bobbin thread will lie straight along under side of the material like this:

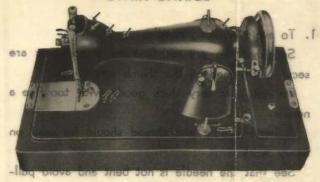

work TELEPTIC TO Its

TO REGULATE TENSION

The tension on the needle thread should be regulated only when the presser foot is down.

Having lowered the presser foot, turn the dial number tension (Fig. 9) at the front of tension discs over toward you to increase tension. To decrease tension, turn the nut over from you.

TO SILITHE MACHINE

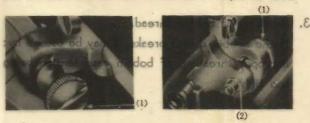

To get easy comfotable running, the machine requires oiling and if used continuously, it should be oiled everyday, and albead to eside the line of the continuously.

Oil should be applied at each of the places shown (Fig. 14).

The more you oil the machine, the easier the machine will be for your operation and noise T

Loosen the screw (1) and push the part (2) forward, fix it up with the screw the feed will be observed to drop in its result.

TO SHAIRHSANWESHINE

1. To avoid breaking needles.

See that the presser foot or attachments are securely fastened by the thumb screw.

Do not sew very thick goods with too fine a needle.

A large needle and thread should be used on heavy work.

See that the needle is not bent and avoid pulling the material when stitching.

To get easy comfotable running, the machine requires oiling and if used continuously, it should be

2. To avoid breaking of needle thread sources believed the needle thread breaks, it may be caused by:

The more you oil the enibrest tregogener the machine will be for your loss so fright so the machine will be for your loss so the will be for your loss so the machine will be for your loss so the will be for your loss so the will be for your loss so the will be for your
